

Steven May
Associate Professor

December 7, 2018

Dear Dr. Lucas Barreto,

Following our recent discussions, it is clear to me that we both have a common interest in the investigation of epitaxial growth and characterization of complex oxide heterostructures that exhibit helical magnetic order. Therefore, I suggest that we initiate a collaborative research project on this topic between Federal University of ABC and Drexel University. As the head of the Oxide Films and Interfaces Group, I would like to invite you to join my research group at Drexel University from June 01, 2019 until May 31, 2020. During this period, we will provide research equipment and laboratory support to assist your research. The research students within my group will also be available to assist in this collaborative project.

I am looking forward to the opportunity of working together with you.

Sincerely,

Steven May
