

26 October 2020

UFABC (Universidade Federal do ABC)

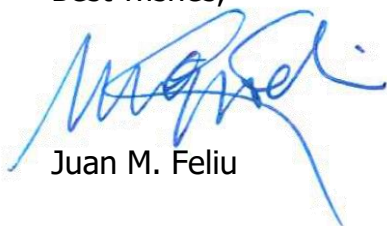

Dear Colleagues:

In this letter I confirm my support for a 3 months visit to my laboratory to be undertaken by **Dr. Camilo A. Angelucci**. The dates for his visit are to be from **01 February to 30 May 2021**. The project is entitled "**Investigation of the Glycerol and some Polyols Electrooxidation on Single Crystal Metal Surfaces**". In this project, we will study polyols oxidation on modified low Miller index of Au by means of *in situ* spectroscopic and electrochemistry techniques. By understanding the products formed, we will propose a mechanism for the reaction and develop methods to increase its efficacy.

Additionally, I would like to inform that the laboratorial research activities in the Universidad de Alicante have been restored by following all the sanitary recommendations.

Lastly, after extensive collaboration during the last 10 years with my Research Group the visit of Dr. Camilo A. Angelucci is an important opportunity to strengthen our main research lines.

Best wishes;

Juan M. Feliu
